

SOLVE ENTERPRISE APP DELIVERY WITH WORKSPACE AS A SERVICE

Workspot: Securely deliver apps and data to any device in 60 minutes

Solve App Delivery to Mac, PC, iOS, and Android Devices

Workspot enables IT to solve all application delivery challenges to laptops, desktops, iOS, and Android devices. Unlike traditional infrastructure software, Workspot has ZERO footprint in your datacenter and 100% cloud control architecture. Starting with the right architecture from the beginning, IT can go live in a production environment in 60 minutes, instead of months.

Simplify Access: Deliver One User Experience Across Devices

Users inevitably carry more than one device – Mac, PC, tablets, smartphones – and regularly use them to access work. However, user experience vary by device presenting a usability challenge, which in turn impedes user productivity and satisfaction.

Workspot's single end user experience enables users to quickly access work apps and data regardless of device. A single PIN activates secured access and single sign-in into apps. Workspot users are able to access apps in just a few seconds, not minutes.

Balance User Experience and Security

Granting frictionless, instantaneous user access to apps and data behind the firewall does NOT mean you also must compromise security. Workspot solves this challenge with a unique architecture that incorporates multiple layers of security:

- Workspot Client secured by Military Grade AES 256-bit Encryption
- Fully secure L4-7 network stack with built in enterprise VPN client
- Remotely wipe corporate data from anywhere
- Zero Footprint in your datacenter means NO new Workspot servers or appliances in your datacenter
- Control Plane Architecture ensures IT control without moving apps or data to the cloud
- Single Pane of Glass management to provision, monitor, troubleshoot, and manage all user activities. Complete visibility to all activities produces a granular audit trail.

Trusted by

“Workspot is so simple to deploy, and it didn't require extra desktop support.”

– Gordon Michelli, Manager of PC Development and Support, Southern Farm Bureau Casualty Insurance Company

“We've been running Workspot since September 2013, and it's enabled our internal teams to serve the City of Milpitas in real time,”

– Mike Luu, IS Director, City of Milpitas, California

Workspot features and specifications

Workspot Control

- 100% cloud architecture
 - Multi-tenant service
 - Runs on Amazon Web Services
- Zero footprint in your datacenter
- Control plane only; no corporate data flows through control plane
- User credentials are not stored in Workspot Control
- Fine-grained policies to control application and document behavior inside Workspot Client
- Insights – measure real end user experience and availability*
- Events – record mobile user activity for data discoverability*
- SIEM – Splunk integration
- Supported browsers: Safari, Firefox, Chrome and IE

Workspot Client

- Workspot Client is a unified workspace to access corporate applications and data
- Single user experience across Mac, Windows PC (x86), iOS, Android
- *Deliver:*
 - Web apps, both internal and SaaS
 - Windows apps
 - Native applications
 - Content repositories: CIFS, intranet, online
- *Integrated stack for seamless security:*
 - CIFS engine for seamless access to network file shares
 - Fully secure L4-L7 network stack with seamless connection to enterprise VPN – Cisco, Juniper
 - Fully encrypted virtual file system
 - Seamless single sign-on
 - Secured enterprise browser
- *Edit and view docs behind the firewall:*
 - View Office documents offline
 - Open, Edit and Save back docs to same network share
 - View HTML5 videos
- Simple user experience with intuitive gestures for navigation
- Enterprise Application Store
- Workspace personalization
- Remote wipe lost or stolen devices

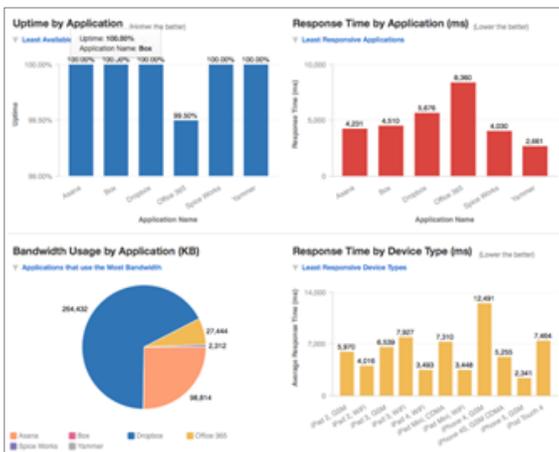

Trusted by

“Workspot aligns with my roadmap of delivering services from the cloud for a more agile IT, and with zero footprint in the datacenter it reduces my overall operating expenses,”

–Chris McPeck, Director of Global Systems & Infrastructure, The International Justice Mission

Insights into Real End User Experience

Events Module – Audit & Discoverability

Workspot vs. traditional infrastructure software

With Workspot, users can use an unlimited number of devices as well as an unlimited number of apps. Workspot includes automatic “no touch” updates to Workspot Control and Workspot Client – we update our software 4-8 times per year.

In comparison, Citrix, VMware, and MobileIron, have complex on-premises architecture with multiple components that can take months to deploy, have a significantly higher total cost of ownership, and lack a single pane of glass view. Deploying those solutions into production in 60 minutes is quite simply not possible.

Key Features	Workspot	VMware	Citrix	MobileIron
Secure Browser	100% Cloud Zero footprint in Datacenter	Mobile Gateway	Netscaler	App Tunnel
CIFS, SharePoint, etc.		Content Locker	ShareFile	Averail
Windows Apps		View	XenApp	-
Single Sign-On		Horizon	App Controller	-
Mobile Device Management		Airwatch	XenMobile	MobileIron
Big Data Security & Performance		-	-	-
Single Pane of Glass management and monitoring		-	-	-

Take the Challenge

About Workspot

Workspot is the leading 100% cloud-based provider of Workspace as a Service. Workspot is the fastest and simplest solution for enterprise mobility. In 60 minutes, Workspot solves the corporate challenge of securely delivering apps and data to any device with a single frictionless user experience across mobile, Mac and PC platforms. Workspot connects all mobile users to all apps and data with zero footprint in the datacenter and without migrating data to the cloud.

Based in Cupertino, California, Workspot is recognized by Gartner as “Cool Vendor” in endpoint computing. For more information, visit www.workspot.com.
