

Top 6 Reasons

To Choose Google Cloud and Workspot VDI

The Google Cloud Platform and Workspot have combined forces to create the world's most extensive, secure, high-performance VDI offering that offers a great end-user experience while also being easy for your IT team to manage.

Why Google Cloud and Workspot are the best choice for your company's strategic VDI initiatives:

HIGH-PERFORMANCE VDI ANYWHERE IN THE WORLD

The global reach of Google Cloud and the hybrid multi-cloud architecture of Workspot's enterprise VDI platform makes it possible for your people to access their virtual apps and desktops with outstanding performance – including GPU-driven apps – from almost any country or region in the world with minimal latency.

PRODUCTIVE, FULFILLING END-USER EXPERIENCE

The high availability and reliability of Google Cloud, coupled with Workspot's deep inspection and observability tools Watch and Trends, minimizes the impact of potential problems to keep end-users productive and happy from anywhere.

HIGHLY COST-EFFECTIVE

Working in concert with Google Cloud, Workspot VDI can help optimize power management, and thus control costs, across the global enterprise VDI estate. The combination of Workspot VDI running on Google Cloud represents an extremely powerful yet cost-effective VDI solution, especially when using Chromebooks/ChromeOS endpoints.

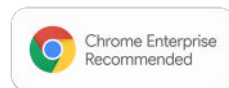

HIGH AVAILABILITY WITH RAPID RECOVERY

The Workspot Global Desktop feature enables 1-click rapid recovery on Google Cloud in case an endpoint loses connectivity for any reason – planned or unplanned, natural disaster, or ransomware/malware attack.

CHROMEBOOK AND CHROME-OS FRIENDLY

The Workspot VDI client runs on Chromebooks/ChromeOS, as well as Chrome Enterprise.

EASY TO IMPLEMENT, OPERATE, AND MANAGE

Google Cloud is known for its ease of access, management, and operation. Likewise, the Workspot Control console makes managing and operating the VDI platform extremely simple compared to other VDI offers.

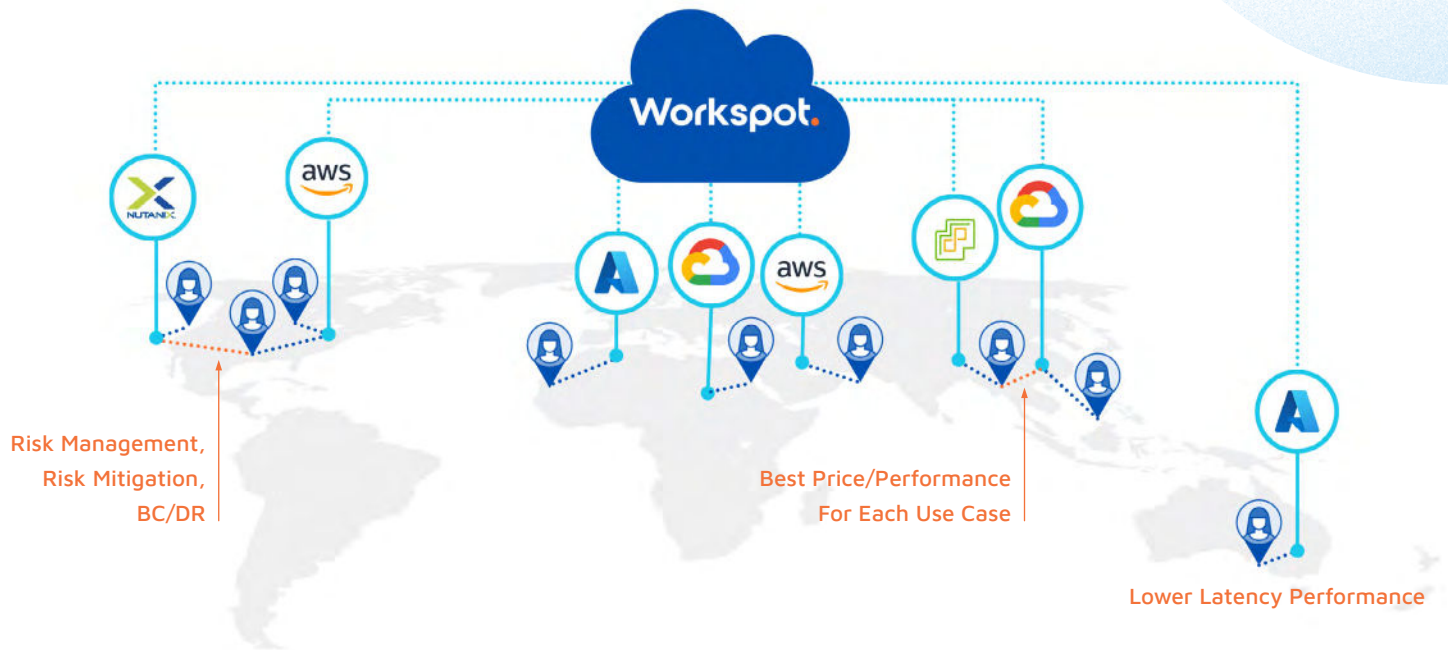

As leaders in global cloud services and enterprise VDI for the hybrid multi-cloud era, Google Cloud and Workspot have forged a strong solution for organizations of all sizes to provide their people with powerful, secure, highly available, and easy to manage access to virtual apps and desktops from their endpoint devices of choice, from anywhere.
